

Activity 2: Create a SaaS Renewal Team Mandate

Course TGS-2023020567 · K2 · A2 · A3

Objective

Assign negotiation roles, decision rights and escalation rules for a cross-functional software renewal.

Real-world use-case basis

Real-world use case: SaaS renewals require commercial, technical, legal, security and end-user decisions. The company and figures are fictional training inputs.

Scenario

Northstar Distribution's CRM subscription renews in 30 days. Sales wants advanced automation, IT wants fewer integrations, Security needs stronger incident notification, Finance wants a cap on annual increases, and Legal must approve data-transfer terms. The vendor account director can offer discounts but needs regional approval for liability changes.

Primary source

<https://builtin.com/articles/negotiation-skills>

Training assumptions

- The current annual contract value is SGD 240,000 for 300 users.
- Forty-five licences are inactive; migration to an alternative takes four months.
- The CFO may approve up to SGD 255,000 if three defined risk controls are included.
- Only Legal may accept changes to liability, data location or termination language.

Questions

1. Who owns the commercial outcome and who can bind the organisation?
2. Which specialists must attend, remain on call or review offline?
3. What commitments can the lead make without escalation?
4. How should the team handle internal disagreement during the vendor meeting?

Expected output

A one-page negotiation mandate plus a named role and escalation table.

Acceptance test

Every critical issue has one accountable owner, one decision authority and one escalation route; no participant has conflicting authority.
